

## **Warehouse Forklift Safety Training British Columbia**

Warehouse Forklift Safety Training British Columbia - The corporation would face claims for liability when damage and injuries are sustained in an accident at the workplace. Warehouses can be a hazardous place to work for its workers, making employee safety a top priority for the company. Warehouse safety training is amongst the most effective measures to protect personnel, while minimizing costs connected with injuries and accidents.

Warehouses hold stock which could present various dangers, particularly related to materials handling. Moving stock, either by hand or making use of powered equipment, could cause injuries to workers' hands, fingers, toes and feet. Slipping, tripping and falling are common causes of injury. Heavy stuff can fall off shelves and harm workers. Forklifts and other machinery carry inherent hazards because they manipulate heavily laden pallets. Wrong lifting is a common source of back injuries. Even box cutters, nails and splinters could result in harm.

Warehouse conditions could change from one minute to the next, depending on the substances or materials being handled, the work being performed and the machine being used. Because of the wide variety of possible hazards in warehouse environment, warehouse operations are regulated by many different standards. There are regulations for storage and material handling, for walking and working surfaces, and rules governing the use and selection of PPE (personal protective equipment).

Most of the safety regulations covered by a company would consist of common sense regulations. Regulations that warehouse personnel must be quite familiar with consist of:

1. Safety is a top priority at all times while working in a warehouse.
2. PPE, like for example gloves, safety shoes, hard hats and eye protection, should be worn as appropriate.
3. Possible hazards should be inspected and reported.
4. Understand warning signals and signs - and follow them.
5. Pay attention to the job you are doing.
6. Pay attention to what others are performing nearby - especially forklifts and other dangerous machinery.
7. Make certain that stacked products and materials are stable and secured.

Adherence to good housekeeping rules would help to ensure a safe warehouse for all workers. Essential housekeeping regulations involve keeping floors and aisles clear of objects, such as wires and cords. Never perch objects insecurely on a surface. When spills occur, clean up at once. Throw trash in proper containers. Keep fire exits, fire extinguishers and sprinklers accessible. Put box cutters and other sharp tools away instantly after using. Report tripping hazards like for instance loose or damaged flooring.
