

## Crane Operator Certification British Columbia

Crane Operator Certification British Columbia - The process to allow individuals to be able to operate specific types of cranes is to take crane operator certification training to acquire certification. The certification process comprises classroom learning, hands-on practice and an ability evaluation. Various training programs are existing for overhead cranes, mobile cranes, tower cranes, forklifts, boom trucks and several hoisting devices. Trainees will know the basics of equipment characteristics, safety, and operational practices connected with these types of cranes.

### Customized Practical Training and Evaluation:

Businesses could request customized practical evaluation and training on-site at the work facility after the in-class session. Two operators will be trained at a time by an instructor. The length of time needed for training would vary depending on the employer's levels of ability and machine kind, but generally requires one to two hours. The training will concentrate on practical skills like for instance correct rigging practices, safe operating procedures and planning the lift. Employers must pre-schedule the on-site session.

Following in-class instruction, practical operating instruction and evaluation, and written test, the trainee will receive an individual wallet certificate and the company will receive a wall certificate. In order to achieve certification, trainees should have an 80 percent passing score on both written and practical tests.

The program comprises: Regulations and policies; instruction manuals; safety concerns; hazards of high voltage; signals and communications; emergency rescue procedures; pre-operational inspection; types, components and terms; crane configuration and capacity; pre-lift planning and set-up; wire rope and rigging; hammerhead / luffing jib crane operations; climbing cranes; fall protection; crane maintenance; CPR & First aid; and WHMIS.

The minimum basics for becoming an overhead crane operator include possessing the mental and physical capability needed to do crane work. Essential capabilities comprise normal field of vision, depth perception, reaction time, coordination and manual dexterity. Potential operators must not have the tendency to become lightheaded. Operators who do not already have evidence of qualifications and experience must get certification. Operators have to be qualified in order to operate the certain type of equipment that they would be using to carry out their task.
