

Telehandler Training Courses British Columbia

Telehandler Training Courses British Columbia - Employers are responsible for making sure that their operating personnel and supervisors are trained to work proficiently with telehandler machines. The competence level of workers should be assessed. If deficiencies are found, employers need to provide training so that workers get the necessary level of skill. The level of responsibility of the individual should be taken into account when training is offered. Effective training will solve any deficiencies in the knowledge, skills and understanding of telehandler operators and supervisors. Training may be undertaken through in-house session or by engaging the services of an external training provider. An assessment at the completion of the training period will determine whether or not the learning objectives have been met.

Federal, state/provincial and local regulations set out guidelines for basic telehandler operator training and testing. Basic training does not address such subject matters as the lifting of people, the lifting of suspended loads, making use of various attachments, or the use of rotating machinery. Further training would need to be undertaken if such tasks are required on the work site.

Maintenance and Inspection

The telehandler needs routine maintenance like any other machinery. The equipment would wear out sooner or later, so proper maintenance is required to guarantee the safe use of the telehandler machine. Checks and inspections are important to ongoing maintenance measures. Operators should have machine-specific training in order to monitor, prevent and rectify problems connected with deterioration, damage and wear. Personnel require experience and competence in both breakdown and periodic maintenance. The manufacturer's preventative maintenance directions should be seriously viewed and complied with, considering such factors as environmental conditions in the work setting and frequency of use.

The responsibility for making certain that the telehandler and its attachments are in good working order lies with both the user and owner of the machine. General maintenance is usually done by the telehandler owner whereas pre-use checks are typically performed by the user.
